Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 and 50-55, drawn to a quadrature modulator, classified in class 332, subclass 103.
 - II. Claims 24-46, 64-69, 73, and 74, drawn to gain and phase compensation, classified in class 375, subclass 371.
 - III. Claims 47-49, drawn to a phase shifter, classified in class 331, subclass 135.
 - IV. Claims 56-60 and 71, drawn to a digital filter, classified in class 375, subclass 350.
 - V. Claims 61-63 and 72, drawn to determining a time domain impulse response, classified in class 455, subclass 67.11.
 - VI. Claim 70, drawn to determining a DC offset, classified in class 375, subclass 319.
2. The inventions are distinct, each from the other because of the following reasons: Group I refers to a quadrature modulator which produces quadrature modulated signals from baseband signals. Group II refers to a gain and phase compensation apparatus and method which compensates for gain and phase imbalances in a signal. Group III refers to a phase shifter which receives a local oscillator signal and shifts the phase of a signal in response to a control signal. Group IV refers to a digital filter which filters a signal by applying impulse responses to the signal. Group V refers to a method of determining time domain impulse responses. Group VI refers to a method of distinguishing DC offsets produced from a modulator and demodulator.

Art Unit: 2634

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
